Pear	Chard	Okra	
Avocado	Cilantro	Summer squash	
Apple	Collards	Papaya	
	Parsnip		
	Spinach		
	Watercress		

### 3. Fridge in “Chamber Check” Mode

When using the sustainable fridge, after no inputs from the user for 30 seconds, the fridge will make a list of which chambers have the greatest difference with the temperature and their preset temperature. With the differences measured it will focus at one chamber at a time adjusting its temperature with the solenoid valves and humidity through the misters. Once then it will move on to the next chamber in the list and go to the end. Once it reaches the end of the list it will repeat the list, updating the temperature and humidity. This will repeat till it needs to adjust one of the chamber’s temperature/humidity till the fridge reaches the appropriate levels. If the chamber is set to off, it will display “Off” to the Chamber assigned to it is off and will be checked

#### 4. Changing Environments (Using Presets)

Procedure:

1. If the button has not been pressed, press any of the 4 buttons to go to the select chamber screen, please do not press any buttons while changing screens
2. Press according to the screen which chamber you would like to edit
3. Then press button B
4. Then press button A
5. Then pick any of the presets in the menu or press button C to switch between the two parts
6. You will get a prompt telling it is done and press any button to go back

Note: A changed environment by a user will be first to be checked on before the other chambers

#### Visual Map
